Entered, according to Act of Congress, in the year 1875,
By D. APPLETON AND COMPANY,
In the Office of the Librarian of Congress, at Washington.

INTRODUCTION.

It is impossible to say any thing absolutely new on the use of books for self-culture. Even the epistolary treatises on the advantages of literature, written by Egyptian scribes two or three thousand years before the compilation of the First Book of Moses, contain, in general terms, the best that can be said now. However, there is always somebody still in his A B C's on some subject or other, and there will be some one also to whom a few words on What and How to Read are welcome advice.

We have, fortunately, arrived at an age when book-making and reading is an absolute necessity. Every little addition to the sum of human knowledge is scattered broadcast, and every branch of science is made the subject of multifarious expositions, adapted for every variety of intellect. To show a supercilious disrespect for the daily increasing multitude of books is not to affect superior wisdom, but to display some degree of ignorance. The times are past when it sufficed to sit for a while at the feet of a wise man in order to hear all that was known. Ours is also not an age when a sound

8476

education, received in one's youth, can keep a man for life afloat in the ever-surging sea of human endeavors and accomplishments. This day there are a thousand voices to teach, and not one teaches the thousandth part of what may be known ; the college-hall is now but the passage-way to the halls of literature—no one can give us our education, but at best only some general hints how to educate ourselves through the aid of books.

The multitude and excellence of our books do by no means render educational institutions less important. The preserved brains of standard books are to a young mind not half as nourishing as the living voice of able teachers. It may be observed that people, when rich, are more ready to acknowledge that they are self-made men, than, when learned, that they are entirely self-taught. The reason is, that in circles of learning the self-taught but seldom hold—though their acquirements be the same—a position of equality with those who have passed through a regular course of academic, collegiate, and university training. It is natural to call in question the depth and accuracy of the information of those who have had to depend entirely on the teaching they could receive from books. When we ourselves are not connoisseurs of some article we desire to purchase, we look for some one to inform us of its value, and, if possible, to guarantee it. Men of little learning often possess, to a wonderful degree, the power of expressing themselves on the most intricate subjects, with an easy flow of language and a felicitous choice of words ; while

others of great learning make their statements with a stammering tongue, and in sentences so incoherent that one can hardly follow the thread of their remarks. If there were nothing to testify to the soundness of the one and the unsoundness of the other, there would be many more men in the wrong place than now.

But, without taking social standing and public opinion into further consideration, no one will doubt that those who have been for years under the teaching of experienced and learned persons, gain, as a rule, a better understanding of the aims and achievements of a certain branch of study, than those who derive their knowledge of it only from books. Many books bear titles seemingly indicative of great learning, and are written in a style of wondrous self-assurance; and persons reading them without the fundamental education to know when they are getting into wilds of nonsense and bombast, are apt to suppose that, with every sentence in them, they acquire valuable information. A man who has been through college, and perhaps in a professional school, is not so much in danger of wasting time on the study of authors who, from ignorance, or for lack of an internal sense of literary honor, mingle fictions with facts, and care little whether they lead astray or aright.

Still, all who have kept abreast with the progress made in their own science, or whatever their pursuit may be, must acknowledge that they themselves are in a measure the pupils of books, and hence, self-taught men. As said before, all that can be obtained at col-

leges and universities is but a safe foundation for self-study; and if any one received, on graduation-day, a certificate, signed by all the professors of the world, that every part and particular of what is known had been fully mastered by him, the next year—alas! the next day—would find him behind the times. Thousands are everywhere at work in all the fields of human knowledge, digging up daily something of value, of the quantity and quality of which all diligent men of science feel the need of instantly receiving exact information, which they can obtain only from books.

A Dutch anatomist, it is said, once showed a visitor his dissecting-room as the sole library he possessed; but to-day a man would only expose himself to ridicule if he pointed to his laboratory as his only source of information. He is wasting time. What he is trying to do in his own workshop, a thousand others, scattered over the world, are trying to do in theirs, and some one else accomplishes first. Not to turn to books to become acquainted with every advancement made in one's own line of research, is like preferring for locomotion a Russian swing to a locomotive. Yet nine out of ten of the inventions offered for registration at the Patent-Office are but repetitions of what has been invented long ago. The aspirants to wealth and fame then discover that they have been ruining themselves with a long-continued expenditure of time, labor, and psychical force, which might have been prevented by an adequate study of the principal works in which the new

discoveries and inventions of the nature they intended to make were described.

But it is only one of the current fallacies of the day that to know one thing well one should constantly keep studying it, and nothing but it. The fact is, that it is impossible to know one thing well without knowing a hundred subjects, many apparently without relation to it, almost equally well. The interrelations and overlappings of science—as of every thing in the universe—are wonderful. We are employed with architecture, and all mechanical and physical sciences contribute to our art. Every stream has hundreds of tributaries, long or short, coming from the northeast, or from the northwest, and entering it either in the north, near the source, or in the south, near the sea. We study botany, and the cookery-book may state something about the nature of a vegetable that scientific botanical works do not mention: it will happen that Bridget, in the kitchen, has noticed what the eminent naturalist has overlooked. Some dog-day of thought the scientist goes to a book of romances or ballads, to escape from his city of ideas, and regain coolness and vigor of mind in the airy and lofty realms of fancy: and perchance a line of the poet gives him, as from a mountain-peak, a more comprehensive view of his subject of inquiry than he ever had before.

People should have special branches of study, but they should by no means confine their reading to a single, and, perhaps, infinitesimal subject. So much is certain, at least, that no one should, at the outset,

restrict his self-culture to any one object. However wide one's course of reading, there will, in time, be developed a decided preference for certain classes of study; some subject will prove of special interest, and, without the conscious exercise of effort of will, books not related to it will be more and more neglected, and finally entirely laid aside. The intellect weds itself to a science very much as the heart chooses a companion for life: both may set out in search of what corresponds to their preconceived ideals, but the final selection is made with very little regard to them, and by a process so natural that there is no accounting for what did determine the choice.

Men of science, professionals, professors, and preachers, who for life adhere to the study of only one branch of science, do it rather from necessity than from choice. A temporary inclination to fathom the depth of some field of human knowledge, or a sudden vanity to become known as a specialist of a certain order, placed them in spheres where the constant pursuit of the same study afterward became a matter of compulsion. They keep on reading the same class of literature because their professional duties compel them to investigate to-day this, and to-morrow another detail of what they are expected to know. What they read greatly depends on the requirements of the hour.

Though the advice to make an early choice of a subject for study, and to adhere to it for life, is plausibly the best, yet the experience of eminent men proves it to be utterly injudicious. Success but seldom comes

by life-long planning, and a steady steering for a single aim. All famed self-taught and self-made men passed through careers of wondrous mixtures of occupations, and what they achieved they owed not to extraordinary wisdom or circumspection, nor to having had better opportunities than other men, but to an ever-readiness to forsake one pursuit for another, and to engage with heart and soul in whatever momentarily seemed more congenial or remunerative. Some persons doom themselves to complete and irretrievable failure by summoning moral courage and iron will, as they are pleased to call it, to keep in a line of study for which they have long ago lost all genuine interest. Not everybody is a gold-digger by nature. Promises of immeasurable wealth could not induce some people to spend months or years, at one spot, in blasting and shoveling and digging, to reach some layer deep down, where a valuable vein is supposed to be running. It suits them best to wander from the gold-fields of California to those of Peru, and thence to Australia, and to the diamond-fields of South Africa, with the hope of picking riches from the surface of the soil. If both succeed, the gold-digger and the gold-washer accomplish the same, though one is described as the rolling stone that gathers no moss.

This rule may be laid down for all: read no book of which the subject is not of great interest to you, and of which the language and general treatment are such that you cannot easily understand it. The mental benefit derived from the reading of a book one does not like, is

about as great as the advantage the body has of food repugnant to it. One's pleasure in a book should be such that he lays it reluctantly aside when other occupations call him away. To exercise our force of will to go through a work because somebody we esteem has recommended it to us, and because we do not wish to lower ourselves in his estimation, is partly folly and partly deception.

It is true that at school or college the young have often to study books the phraseology and treatment of which are not of a kind to invite their attention, but the teacher's explanations and illustrations on the portion set for a task are expected to ring in the student's ear while studying it. Where there are no teachers to popularize the text-books, or rather to translate them into a child's or youth's language before requiring the study of them, the books used should be so simple that a child or youth could study them without a teacher.

Young persons are sometimes counseled to read books difficult for them to understand, over and over again, until they do understand them. It is an unprofitable employment. The first perusal of too scientific a book avails but little; the second renders the subject less interesting, without making it any the clearer; and at the third, though the words are beginning to fasten on the memory, the interest is wholly gone, and the real meaning is entirely obscured. If a subject chosen for study is extensive and complicated, it is better to read on it three books of a character befitting one's temper

and understanding, than one book that overtaxes the mind. If it is extremely doubtful that we possess the strength and agility to venture to climb over a rugged, steep, and high mountain, it is better to go around it, though it may take us three times as long. Only in case that a particular study must instantly be made, and no book can be found which meets our special requirements, is there good reason for abandoning the rule. In ordinary circumstances nobody should be encouraged, and much less compelled, to read a work above his mental capacity.

The age we live in has many things justly to be proud of, and one of them is the extensive literature which enables every one to choose, on any subject, just such a book as meets his own purposes, and corresponds to his own intellectual standing. But, considering the fact that every year about five thousand works are published in the English language alone, it is not to be wondered at that even those most interested in a certain subject frequently fail to know the latest and best treatise on it, or some simple and intelligible book to recommend to a friend. People are well assured that whatever book they need is most likely to be obtained, but are often at a loss how to reach it, knowing neither by whom nor under what title it has been written. Surrounded by the great wealth of recent literature, they exclaim, in their genuine *embarras de richesse*, "What shall we read?" They need some one to put order into the seeming chaos, some one to classify the great mass of literature, some one to single out the new books that

have appeared on the subjects in which they take a special interest.

When some one imagines that he answers the question, "What to read?" satisfactorily, by naming the Bible and Shakespeare; or when another urges, in addition to them, the use of a Cruden's "Concordance;" or when a third says that it would be well for everybody to spend a year on chemistry, another year on botany, and a third on physics; or when still another thinks he is giving a complete list of the books needed for a good education, by the following: the Bible, Shakespeare, Spenser's "Faerie Queene," Sidney's "Arcadia," works of Sir Thomas Browne, works of Rev. Cyril Jackson, Walton's "Complete Angler," Clarendon's "History," Milton, Chaucer, Jeremy Taylor, South's "Sermons," and Fuller's "Church History,"—one can but smile piteously at the author's low estimate of the culture demanded by this age. Not one-tenth of the world will now care to read—excepting, of course, the Bible and Shakespeare—any of the books mentioned. The times have changed. People want to know more of the history and achievements of humanity than a little biblical history, English drama, and theology. The times are past when a dozen books could be made to satisfy the intellectual cravings of a whole generation. The high-schools have ceased to be convents and theological seminaries. The present duty of colleges and universities is to lay before every new generation the general outlines of all the acquirements of the past. Their task is to give that training

which enables the adolescent to be judicious in the selection of a career, and of the means of accomplishing his purpose; and nothing further. Now the wise educator points to the entire, vast series of books, as the record of all human endeavors, and says: "Pursue what you like, according to your talents and abilities, taking pains to advance, by whatever you do, as well the development of your own manhood as that of humanity."

Centuries ago, when books were few and costly, and not many of them good and accessible, it was possible to refer to a dozen books as containing very nearly all that a cultivated man needed to know. In former times, when scientific and artistic pursuits were far from being multifarious, it was very well to counsel the young to choose one profession rather than another. When it was still a matter of considerable expense to attend a school where any thing more than the merest rudiments were taught, those who were rich enough to undertake long voyages for the purpose, and to pay high fees to the professors, and high prices for their books, looked upon what they learned rather as being a pastime, or adornment, than as a foundation for the work of their lives. But at present, when one's study is to be his bread; when culture is sought by and afforded to the rich and poor alike, to satisfy their craving for knowledge; when one's social position and individual happiness depend on his intellectual attainments, and when it is in the interest of humanity, as well as one's own, that everybody specially applies himself to those subjects for which his

natural endowments qualify him, and in which he is most apt to meet success—at present no one should undertake to reply to the question, "What to read?" by enumerating a list of books. Where is the wise man to select a dozen or a hundred books to give the general public, old and young, ignorant and educated, talented and dull, with the promise that every individual will find in them that which he needs to know in order to be successful, and become equal to the best in his profession, or trade; that which will fully answer his own peculiar talents and inclinations, that which will unfold his entire moral, intellectual, and spiritual nature?

A multitude of persons, one differing from another in heart, hand, mind, and aims, if putting one and the same question—"What to read?"—must receive a multitude of answers. And such a multitude of answers is given with this book. Each list of works of various degrees of scientific treatment, under any of the nearly two thousand headings, is a most direct answer to a special class of persons. On fifty subjects the contents and value of the principal publications are discussed more or less briefly. The numbers prefixed to the authors' names on the left-hand side of the pages express neither praise nor blame: 2 indicates that the book will suit a general reader of ordinary education; 3, that some higher degree of culture is needed for a full appreciation of it; 4, that it is written for professional or advanced students of the subject; and 5, that in scope and treatment it is especially adapted for a book of reference. Only in some cases, where, for

example, all in a list are intended for reference only, the figures indicate the scientific value and character of the books. If, now, a person knows his own needs and inclinations, and is capable of estimating his degree of culture, he will obtain from this book a most explicit and trustworthy reply to his question, what he shall read; no matter on what subject—art, or science, or whatever pursuit or field of learning.

No one should complain that the suggestions here given are so few and so general. That is the best education which lays only the foundation for educating one's self, which provides only the tools wherewith to gather the material for the edifice of culture; for everybody must build according to the requirements of his position in life, and develop according to his psychical idiosyncrasies. To make men according to an image, though it were conceived by the noblest and loftiest of minds, would rather thwart than foster the general development of humanity. This is the art of education: to make the pupil conscious of his own powers, and cognizant of the various directions in which he may exercise them, without causing him to neglect or check the growth of any of his talents, and without urging him in any direction. On this depends the future of humanity: that everybody is allowed to be what he can be, to pursue what he can attain, to seek his own happiness where he himself thinks that he shall find it, and to minister to the wants of his fellow-men wherever he thinks that they have need of him, and he can serve them.

It is impossible to praise this age too much and too highly, for the facilities which it offers to every one for his culture. No subject of research is so intricate and profound that there is no book to explain it, in its general results and bearings, to persons of the most limited education. When education was yet in the sole charge of the Church, and the movements of science were watched with suspicious eyes, scientific works were never written for the purpose of instructing the larger classes of non-scientific people. The Church set the limits of what the masses should know; and men of science were aware that, if they wanted to be unmolested, they had to keep their wisdom to themselves. The few scientific works that were written were couched in a sort of learned *argot*, to be understood only by the initiated. But as the ranks of science were filling, and inventions, discoveries, and other achievements multiplied, learned men took courage to discuss openly, and in a more popular style, the results of their researches. The success which suddenly attended scientific investigations, made the Church lose heart to oppose the general pursuit of learning as firmly as formerly, and caused the control over the educational institutions slowly to pass into the hands of science. When once the learned fraternity had obtained the people for an audience, they composed their works so as to gain their applause, caring little whether they were ordered to swell the *Index Librorum Prohibitorum* or not.

Thus the great watchword of our age—"diffusion of knowledge"—came to be adopted. The great aim

of scientists and philanthropists, the successors of the clergy, is to make education as general and as wide as possible. It would now be deemed a crime to withhold from the great mass any thing that is known; and whatever is pretended to be known receives no honor until it has obtained the recognition and approval of the people. And the fraternal manner in which the acquirements of everybody, in all departments of knowledge, are freely and equally distributed among all who open their hands for them, is the most essential, and so far the only possible step toward the realization on earth of that ideal spirit of humanity expressed by the three words, "Liberty, Equality, and Fraternity." Countries, small and great, borough and metropolis, rival each other in affording to the young the most thorough and multifarious education. Schools, colleges, universities, and libraries, are opened and sustained everywhere, either by the government, as the representative of the people, or through the *largesse* of private individuals. Whoever knows any thing of value hastens to share it with his fellowmen; and whoever supposes that a certain branch of knowledge has not been treated in a manner sufficiently clear and agreeable for the information of the less educated, sets to work to popularize it. On the one hand compulsory school-attendance, on the other the general willingness on the part of the most learned to share freely their attainments with the uninformed, by explaining their researches so as to be understood by them—these are "signs of the times" that augur

the fulfillment of the brightest dreams of humanity; for, surely, if this dark world is ever to be illuminated, it will be by the light that knowledge kindles in man.

G. A. F. Van Rhyn.

New York, *February* 20, 1875.

NOTE.

ONLY noteworthy books in the English language, published during the last five years in England or the United States, are mentioned.

New and revised editions of earlier standard works have sometimes been noted, but others, that have not recently passed through a new edition, are not given.

Though nearly seven thousand books have been classified under about two thousand heads, many no doubt excellent works could not be brought within the small compass allowed, and many subjects could not receive a separate heading. The Index may be consulted for titles not in the table of contents.

If a list of books on some important branch of literature seems proportionately small, it shows that but little has been recently published on the subject.

The numbers prefixed to the authors' names on the left-hand side of the pages express neither praise nor blame:

2 indicates that the book will suit a general reader of ordinary education;

3, that some higher degree of culture is needed for a full appreciation of it;

4, that it is written for professional or advanced students of the subject;

5, that in scope and treatment it is especially adapted for a book of reference.

Only in some cases, where, for example, all in a list are intended

for reference only, the figures indicate the scientific value and character of the books.

On fifty subjects the contents and literary worth of the principal publications are discussed more or less briefly.

English books, not republished in this country, are marked "London," and the price is calculated at one dollar for every two shillings, the usual charge for importation.

American books are marked at prices for the ordinary binding, and generally for the cheapest editions in the market.

The price of books is subject to slight modifications.

Père, 17; Bismarck, Prince, 22; Bonapartes, 22; Booth, Edwin, 23; Brainerd, Rev. Thomas, 24; Brassey, Thomas, 24; Bright, John, 25; Brontë, Charlotte, 25; Brougham, H., 25; Brute, Rt. Rev. Gabriel, 25; Bunsen, Baron, 25; Bunyan, John, 25; Burns, Robert, 26; Burns, Rev. W. C., 26; Burr, Aaron, 26; Burr, William, 26; Byron, Lord, 26; Cæsar, 26; Calhoun, J. C., 27; Campbell, Alexander, 27; Carlyle, Thomas, 27; Carson, Kit, 28; Chalmers, Thomas, 29; Chambers, Robert and William, 29; Channing, William Ellery, 29; Choate, Rufus, 32; Christ, 32; Clarke, D. W., 36; Cockburn, Lord Henry, 38; Collins, S., 38; Columbus, Christopher, 38; Conant, Mrs. J. H., 39; Cookman, A., 41; Cooper, Anthony Ashley, 41; Copley, John L., 41; Cortes, Hernando, 41; Crittenden, J. J., 42; Cromwell, Oliver, 42; Dahlgren, Ulric, 42; Dallas, Alexander James, 43; Dante, degli Alighieri, 43; Davis, Jefferson, 44; De Foe, Daniel, 44; Denman, Lord, 44; De Quincey, Thomas, 45; Deutsch, E., 45; Dickens, Charles, 46; Disraeli, Benjamin, 46; Doddridge, Philip, 47; Dryden, 48; Dumas, 48; Dunham, Thomas, 49; Dunster, Henry, 49; Durer, Albert, 49; Edgeworth, Maria, 50; Eliot, Sir John, 67; Erskine, Lord, 71; Evans, William, 73; Evelyn, John, 73; Everett, Edward, 73; Fairfax, Lord, 74; Faraday, Michael, 74; Fern, Fanny, 75; Fonblanque, Albany, 77; Foote, Andrew Hull, 77; Forbes, J. D., 77; Forrest, Edwin, 77; Franklin, Benjamin, 78; Frederick the Great, 78; Galileo, 80; Gallitzin, A. de, 80; Gay, John, 80; Gib, Robert, 82; Gillray, James, 82; Goethe, 83; Goldsmith, 83; Gottschalk, L. M., 84; Grant, U. S., 84; Greeley, Horace, 85; Greene, Nathaniel, 85; Greville Memoirs, 85; Guerin, Maurice de, 85; Guthrie, Thomas, 86; Halleck, Fitz-Greene, 86; Hemans, Mrs. F., 88; Holbein, 89; Holland, George, 90; Holland, John, 90; Hopkins, J. H., 91; Hughes, Archbishop, 92; Humboldt, A. von, 92; Humboldt, W. von, 92; Huss, John, 93; Irving, Washington, 97; Jackson, Andrew, 98; Jackson, Stonewall, 98; Jefferson, Thomas, 99; Jeffrey, Francis, 99; Kearney, Philip, 109; Keble, John, 109; Keith, Mrs. Caroline P., 109; Kendall, A., 109; Kennedy, John P., 109; Knight, Charles, 110; Knox, Henry, 110; Knox, Robert, 110; Lacordaire, 111; Lamb, Charles and Mary, 111; Landon, L. E., 111; Landon, Walter Savage, 111; Landseer, Sir Edwin, 112; Las Casas, 113; Lee, General Robert E., 114; Lessing, 114; Lincoln, Abraham, 115; Livingston, Edward, 115; Livingstone, Dr. David, 115; Lover, Samuel, 117; Lynch, Thomas T., 117; Lytton, Edward Bulwer, 117; Macaulay, Lord, 117; Maclise, Daniel, 117; McVicar, Rev. John, 117; Madison, James, 118; Marlborough, Duke of, 119; Marlowe, Christopher, 119; Massinger, Philip, 120; Matthew, Father, 120; May, Samuel J., 121; Maz-

zini, 121; Mendelssohn-Bartholdy, Felix, 122; Mendelssohn and Goethe, 122; Mill, John Stuart, 127; Miller, Hugh, 127; Miller, Samuel, 127; Milton, John, 127; Minto, Lord, 123; Mirabeau, Count, 128; Morse, Samuel F. B., 130; Moscheles, 131; Mozart, 131; Murchison, Sir Roderick J., 131; Nelson, Lord, 133; Niebuhr, 136; O'Connell, Daniel, 142; Palmerston, Lord, 145; Parker, Theodore, 147; Patteson, John Coleridge, 148; Peabody, Francis, 148; Peabody, George, 148; Peel, Sir Robert, 148; Penn, William, 149; Perceval, Rt. Hon. Spencer, 149; Pickering, T., 154; Pliny, 155; Plunket, Oliver, 155; Poe, Edgar Allan, 155; Potter, Bishop Alonzo, 157; Randolph, John, 162; Raphael, 162; Robertson, Frederick W., 166; Robinson, Henry Crabb, 166; Rossini, 167; Rousseau, Jean Jacques, 167; Schiller, Friedrich von, 169; Schubert, 169; Schumann, 169; Scott, Elder Walter, 173; Scott, Sir Walter, 173; Scudder, Rev. John, 173; Sedgwick, Catherine, 174; Sévigné, Madame de, 175; Seward, W. H., 175; Shelley, 176; Smollett, Tobias, 178; Somerville, Mary, 179; Spinoza, 181; Stockmar, Baron von, 184; Strauss, David Friedrich, 184; Sumner, Charles, 185; Taney, R. B., Chief-Justice, 188; Tappan, Arthur, 188; Thomas, General George H., 191; Thomas, John, 191; Thompson, Count Rumford, 191; Thorwaldsen, 191; Timon, Right Rev. John, 191; Todd, C. S., 192; Vincent de Paul, St., 198; Virgin Mary, 198; Voltaire, 199; Von Hutten, 199; Wagner, Richard, 199; Warren, John, 199; Washington, George, 200; Webster, Daniel, 200; Wells, John, 200; Wentworth, Thomas, 200; Wesley, John, 200; Willard, Emma, 201; Williams, Roger, 201; Wright, Edward, 203; Xavier, St. Francis, 203; Young, Charles Mayne, 204; Zeisberger, 204.

CHEMISTRY, METALLURGY, MINERALOGY, AND MINING.

Agricultural Chemistry, 3; Alcoholic Liquors, 4; Assaying, 13; Blast-Furnace, 22; Blasting, Submarine, 22; Chemical Analysis, 30; Chemical Physics, 30; Chemical Technology, 30; Chemistry, Medical, 31; Chemistry, Organic, and Inorganic, 31; Chemistry, Theoretical, Philosophical, and Miscellaneous Treatises, 31; Coal and Coal-Mining, 38; Coal-Regions, 38; Diamonds, 46; Engineering, 67; Gas, 80; Gems (Precious Stones), 80; Geology, 81; Gold and Silver, 83; Iron, 97; Mechanics, 121; Metallurgy, 124; Microscopy, 125; Mineralogy, 127; Mines and Mining Machinery, 127; Steel, 184.

EDUCATION.

Colleges, American, 38; Education, Essays and Treatises on, 50; Elocution, 67; Etiquette, 73; Gymnastics, 86; Kindergarten, 110; Mnemonics, 129; Oxford, 144; Parent's Aids, 146; Pedagogy, 148; Rhetoric, 65; School-House Architecture, 169; Singing, 117; Teachers' Aids, 50; Voice, 199.

EDUCATIONAL WORKS.

Education, Essays and Treatises on, 50; Algebra, 51; Anatomy, Physiology, Hygiene, etc., 51; Arithmetic, 51; Astronomy, 52; Book-Keeping, 52; Botany, 52; Chemistry, 52; Composition and Rhetoric, 53; Dictionaries of the English Lan-

guage, 53; Drawing and Painting, 53; Elocution (Speakers, etc.), 54; French, 54; Geography, 55; Geology, Mineralogy, and Metallurgy, 55; Geometry, 55; German, 56; Grammar, 57; Grammars for the Use of Frenchmen, Germans, and Spaniards, 57; Greek, 58; Gymnastics and Calisthenics, 59; History, 59; Italian, 60; Latin, 60; Literature, 61; Logic, 62; Mechanics and Engineering, 62; Metaphysics, 62; Music, 63; Mythology and Antiquities, 63; Natural Philosophy (Physics), 63; Penmanship, 64; Political and Social Science, 64; Primary Books, 64; Readers, 64; Spanish, 64; Spellers, 65; Zoology, 65.

GAMES, AMUSEMENTS, AND SPORTS.

Athletic Sports, 14; Base-Ball, 16; Billiards, 18; Boating, 22; Cards, 27; Charades, 29; Chess, 31; Cricket, 42; Croquet, 42; Dancing, 43; Draughts, 48; Field-Sports, 75; Fishing, 76; Game and Gaming, 80; Games and Amusements, 80; Gymnastics, 86; Horsemanship, 91; Hunting and Trapping, 93; Magic, 118; Sporting, 182; Swimming, 187; Theatricals, 190; Velocipedes, 198; Whist, 201; Yachts and Yachting, 203.

GEOGRAPHY, HISTORY, AND TRAVELS.

GENERAL.

Geography, General and Physical, 81; History, Ancient and Modern, 89; History Philosophy of, 89; Travels around and about the World, 193.

AFRICA.

General.—Africa, 2; Africa, Central, 3; Africa, Eastern, 3; Africa, South, 3; Africa, West, 3.

Special.—Abyssinia, 1; Afghanistan, 2; Albert N'yanza, 4; Algiers, 4; Ashanti, 12; Carthage and Tunis, 28; Dahomey, 43; Egypt, 66; Madagascar, 117; Morocco, 130; Niger, 137; Nile, 137; Nubia, 141; Zanzibar, 204; Zulu, 205.

NORTH AMERICA.

Canada, 27; Mexico, 125; New Brunswick, 134; Rocky Mountains, 166.

UNITED STATES.

General.—United States, 196.

Special.—Adirondacks, 2; Alabama, 3; Alaska, 4; Albany City and County, 4; Arizona, 10; Arkansas, 11; Boston, 23; California, 27; Catskill Mountains, 28; Chicago, 31; Colorado, 28; Delaware, 44; Elizabeth, N. J., 67; Florida, 76; Georgia, 82; Hudson River, 92; Indiana, 95; Iowa, 96; Kansas, 109; Kentucky, 109; Lake George, 111; Lexington, Kentucky, 114; Louisiana, 117; Maine, 118; Mammoth Cave, 119; Maryland, 120: Massachusetts, 120; Michigan, 125; Minnesota, 128; Mississippi, 129; Mount Desert, 131; Mount Washington, 131; Nebraska, 133; Nevada, 133; New England, 134; New Haven, 134; New Jersey, 134; New Mexico, 134; New York City, 135; New York State, 136; North Carolina, 137; Ohio, 142; Oregon, 143; Pennsylvania, 149; Philadelphia, 150; Pittsfield, Mass., 154; Rhode Island, 165; Richmond, Va., 165; San Francisco,

168; Saratoga, 165; Sea-side Resorts, 174; Sierra Nevada, 177; Stamford, 183; Summer Resorts, and Watering-Places, 185; Susquehanna, 186; Tennessee, 189; Texas, 190; Utah, 197; Vermont, 198; Virginia, 199; Wallingford, Conn., 199; Warwick, Mass., 200; Washington Territory, 200; West Point, 201; West Virginia, 201; White Mountains, 201; Yosemite Valley, 203.

CENTRAL AMERICA AND WEST INDIES.

Bahamas, 15; Cuba, 42; Havana, 86; Honduras, 91; Jamaica, 93; Nicaragua, 136; San Domingo, 168; Trinidad, 194; West Indies, 201.

SOUTH AMERICA.

Amazon, 5; Andes, 7; Argentine Republic, 10; Brazil, 24; New Granada, 134; Paraguay, 146; Patagonians, 147; Peru, 149; South America, 179.

ASIA.

General.—Asia, Travels in, 13; Central Asia, 29; the East, 49.

Special.—Arabia, 9; Asia Minor, 13; Assyria, 13; Babylonia, 15; Bashan, 17; Beloochistan, 17; Bokhara, 22; Caucasus, 28; Ceylon, 29; China, 31; India, 94; Japan, 98; Jerusalem, 99; Jordan, 100; Khiva, 109; Mesopotamia, 123; Moab, 129; Mongolia, 129; Nineveh, 137; Palestine, 145; Pekin, 149; Persia, 149; Phœnicia, 152; Russia, 167; Siam, 176; Siberia, 177; Sinai, 177; South Seas, 179; Syria, 187; Tartary, 188; Thibet, 191; Turkey, 195.

AUSTRALIA AND PACIFIC ISLANDS.

Australia and New South Wales, 15; Fiji Islands, 76; Hawaii, 86; Java, 99; Malay Archipelago, 118; New South Wales, 134; New Zealand, 136; Pacific Ocean and Islands, 144; Polynesia, 157.

EUROPE.

General.—Travels, and Traveler's Guides, 73.

Special.—Alps, 5; Austria, 15; Anglo-Saxons, 8; Belgium, 17; Caucasus, 28; Cretan Insurrection, 42; Denmark, 44; England, 68; Etruria, 73; Florence, 76; France, 77; Franco-German War, 78; Germany, 82; Great Britain, 84; Greece, 84; Cyprus, 86; Holland and Belgium, 90; Hungary, 93; Iceland, 93; Ireland, 97; Italy, 98; London, 116; Madeira, 118; Malta, 118; Mediterranean, 122; Netherlands, 133; Normandy, 137; Northmen, 137; Norway, 137; Paris, 146; Pau, 148; Piedmont, 154; Poland, 155; Pompeii, 157; Prussia, 160; Pyrenees, 161; Rhine, 165; Rome, 166; Russia, 167; Scandinavia, 169; Scotland, 172; Servia, 174; Shetland, 176; Sicily, 177; Sinai, 177; Spain, 180; Sweden, 187; Switzerland, 187; Troy, 195; Tunnel, Mont Cenis, 195; Turkey, 194; Tyrol, 195; Vienna, 198.

MISCELLANEOUS.

American Navy, 6; Anglo-Saxons, 8; Arctic and Antarctic Regions, 10; Atlases, 14; Civilization, 38; Climatology, 37; Crusades, 42; Geography, Biblical, 81; Huguenots, 92; Indians, American, 95; Inquisition, 95; Jesuits, 99; Jews, History of the, 99; Mediterranean, 122; Meteorology, 124; Middle Ages, 125; Ocean, 142; Reformation, 153; Sea, 173; South Pole, 179; Tropics, 194.

INDUSTRIAL ARTS, MANUFACTURES, AND TRADES.

Alcoholic Liquors, 4; Arts, Industrial, 12; Dictionaries, 11; Bridge-Building, 24; Cabinet-Making, 26; Calico-Printing, 27; Canals, 27; Carpentry, 28; Cements, 29; Ceramic Art, 29; Chemical Technology, 30; Clock and Watch Making, 37; Coal, and Coal-Mining, 38; Cotton, and Cotton-Spinning, 41; Dairy Husbandry, 43; Dentistry, 44; Designing, 45; Diving, 47; Drawing, 48; Dyeing, 49; Electrotyping, 67; Elevations, 67; Engraving, 70; Fish-Culture, 76; Furniture, 79; Glass-Making and Painting, 83; Graining, 84; Horseshoeing, 91; Inventions and Inventors, 96; Iron, 97; Lace, 111; Landscape-Gardening, 111; Life-Boats, 115; Light-houses, 115; Manufactures, 119; Mechanics, 121; Mill-Dams, 127; Mines and Mining Machinery, 127; Painting, Coach, House, Photograph, and Sign, 144; Phonography, 152; Photography, 152; Porcelain and Pottery, 158; Printing, 158; Pyrotechny, 161; Road-Making, 166; Rope-Making, 167; Sewage, 175; Ship-building, 176; Silk and Tea-Culture, 177; Soap, 178; Stair-Building, 182; Steam and Steam-Engines, 183; Steam-Boilers, 183; Strains, and Strength of Material, 184; Sugar, 185; Surveying, 186; Textiles, 190; Tools and Workshop Appliances, 192; Topography, 192; Turning, 195; Vinegar, 198; Watchmaking, 200; Wheels, 201; Wine, 201; Wood-Carving, 202; Soundings and Dredgings, 179.

JUVENILES.

For Boys and Girls, 101; for Boys specially, 105; for Girls specially, 106; for Young Children, 107.

LANGUAGES.

GRAMMARS, DICTIONARIES, ETC.

Afghan, 2; Anglo-Saxon, 8; Arabic, 9; Assyrian, 13; Chinese, 32; Dakota, 43; Danish, 43; English, 69; Flowers, 77; German, 82; Greek, 85; Hebrew, 87; Hindustani, 88; Icelandic, 94; Italian, 98; Japanese, 99; Language and Linguistic Studies, 112; Latin, 113; New Zealand, 136; Norwegian, 137; Pali, 145; Persian, 149; Sanscrit, 168; Spanish, 180.

LAW, POLITICAL ECONOMY, AND SOCIAL SCIENCE.

General.—American Law, 6; Census, 29; Chancery Practice in England, 29; Commercial, 39; Common, 39; Constitution of the United States, 40; Crimes and Punishments, 42; Currency and Money, 42; Diplomacy, 46; English Constitution and Laws, 68; Finance, 76; Free-Trade, 78; Government, 84; Labor Question, 110; Land-Tenure, 112; Law Almanacs and Diaries, 113; Dictionaries, 113; Law, Miscellaneous Essays and Treatises, 113; Practice and Proceeding, 114; Laws, Conflicts of, 114; Monopolies, 130; Municipal Government, 131; Parliamentary, 147; Pauperism, 148; Pleading, 155; Political Economy, 155; Polygamy, 157; Protection, 159; Representation, 164; Roman Law, 166; Secret Societies, 174; Slavery, 178; Socialism, 178; Social Science, 178; Statistics, 183; Statutes, 183; Supreme Court Practice, 185.

Special.—Adminstrator's and Executor's Guide, 2; Admiralty, 2; Agency, 3; Alabama Claims, 4; Alimony, 47; Arbitration and Award, 9; Attachment, 14; Bailments, 15; Bankruptcy, 15; Banks and Banking, 16; Business-Laws, 29; Contracts, 40; Conveyances, 40; Corporations, 41; Corporations, Municipal, 41; Covenants for Titles, 41; Criminal, 42; Damages, 43; Debtor and Creditor, 44; Descent, 45; Divorce and Alimony, 47; Domestic Relations, 48; Casements, 49; Equity Jurisprudence, 71; Estoppel, 72; Evidence, 73; Exchange, 74; Fixtures, 76; Frauds and Mistakes, 78; Frauds, Statute of, 78; Guarantee, 85; Highways, 88; Infanticide, 95; Injunctions, 95; Insurance, 96; Internal Revenue, 96; International, 96; Judgments, 100; Landlord and Tenant, 111; Lien Laws, Mechanics', 115; Life Insurance, 115; Limitation, 115; Magistrates, Jurisdiction of, 118; Malpractice, civil, 118; Maritime, 119; Marriage, 119; Medical Jurisprudence, 121; Mercantile Hand-books, 123; Military, 126; Mortgages, 131; Negligence, 133; Notaries and Commissioners, 137; Partnership, 147; Patents and Copyrights, 147; Pension, 149; Personal Property, 149; Pilot, 154; Probate, 153; Procedure, 158; Real Property, 162; Remedies, 164: Replevin, 164; Sales, 168; Set-off, 175; Sheriff, Duties of, 176; Slander and Libel, 177; Stamp-Acts, 183; Taxation, 188; Tax-Titles, 188; Title to Property, 192; Torts, 192; Township Organization, 192; Trade-Marks, 193; Trusts, 195; Usury, 197; Vendors, 198; Water-Courses, 200; Wills, 201.

LITERATURE.

(*Foreign Classics only in Translations.*)

Æschylus, 2; Alison, 4; Anecdotes, 7; Aristophanes, 10; Bacon, Francis, 15; Berkeley, Bishop, 17; Burlesque, 26; Burns, Robert, 26; Cæsar, 26; Calhoun, J. C., 27; Carlyle, Thomas, 27; Chesterfield, Lord, 31; Cicero, 36; Classical Dictionaries, 37; Cyclopædias, 42; Demosthenes, 44; Dickens, Charles, 46; Disraeli, Benjamin, 46; Dryden, 48; Edgeworth, Maria, 50; English Literature, 69; English Synonyms, 70; Epigrams, 71; Epitaphs, 71; Erskine, Lord, 71; Essays, 71; Euripides, 73; Eutropius, 73; Evelyn, John, 73; Everett, Edward, 73; Fielding, 75; Fuller, M., 79; Gay, John, 80; German Literature, 82; Gillray, James, 82; Goethe, 83; Goldsmith, 83; Gray, 84; Greek Literature, 85; Guthrie, Thomas, 86; Halleck, Fitz-Greene, 86; Heine, Heinrich, 88; Hemans, Mrs. F., 88; Herbert, George, 88; Herodotus, 88; Hesiod, 88; Holbein, 89; Homer, 90; Hood, Thomas, 91; Horace, 91; Humboldt, A. von, 92; Hysterology, 93; Irving, Washington, 97; Jeffrey, Francis, 99; Josephus, 100; Journalism, 100; Juvenal, 101; Keble, John, 109; Knox, Robert, 110; Koran, 110; Lacordaire, 111; Lamartine, Alphonse de, 111; Lamb, Charles, 111; Landon, L. E., 111; Landor, Walter Savage, 111; Language, 112; Legends, 114; Lessing, 114; Letters and Letter-Writing, 114; Livy, 115; Lover, Samuel, 117; Lytton, Edward Bulwer, 117; Macaulay, Lord, 117; Marlowe, Christopher, 119; Marryat, Captain, 119; Martineau, Harriet, 119; Mazzini, 121; Mendelssohn-Bartholdy, Felix, 122; Mill, John Stuart, 127; Miller, Hugh, 127; Milton, John, 127; Montaigne, 130; Moore, Thomas, 130; Names, 132; Novels and Romances, 138; Plato, 155; Plautus and Terence, 155; Pliny, 155; Plutarch, 155; Poe, Edgar Allan, 155; Pope, 157; Proverbs, Collections of, 159; Quintilian, 161; Quotations, Dictionaries of, 161; Rabelais, 161; Sallust, 168; Satire, 169; Schiller, Friedrich von, 169; Scientific

Series, 169; Scott, Sir Walter, 173; Sévigné, Madame de, 175; Shakespeare, 176; Shelley, 176; Smith, Sydney, 178; Smollett, Tobias, 178; Sophocles, 198; Southey, 179; Spenser, 181; Spinoza, 181; Stage, 182; Sterne, Laurence, 184; Strauss, David Friedrich, 184; Swedenborg, 187; Swift, Jonathan, 187; Table-Talk, 188; Tacitus, 188; Talmud, 188; Tasso, 188; Temperance Literature, 189; Terence and Plautus, 190; Thackeray, W. M., 190; Theocritus, 190; Thomson, James, 191; Thucydides, 191; Virgil, 199; Webster, Daniel, 200; Wesley, John, 200; Wit, 201; Wordsworth, 203; Xenophon, 203.

MATHEMATICS, ENGINEERING, ETC.

Algebra, 51; Arithmetics, 10; Astronomy, 13; Book-Keeping, 23; Calculus, 26; Circle, Quadrature of, 86; Educational Works, 51; Engineering, Dictionaries of, 67; Engineering, Civil, 67; Engineering, Military, 67; Engineering, Railroad and Locomotive, 67; Engineering Tables, 68; Equation of Payment, 71; Exchange, 74; Geometry, 82; Interest Tables, 68; Logarithms, 116; Mensuration, 123; Navigation, 133; Ready Reckoners, 162; Trigonometry, 194; Weights and Measures, 200.

MEDICINE, PHARMACY, SURGERY, ETC.

Science, Practice, and Miscellaneous.—Anæsthetics, 7; Anatomy, 7; Bath, 17; Biology, 21; Chemistry, 31; Clinical, 37; Diagnosis, 45; Dietetics, 46; Digestion, 46; Domestic, 48; Electricity, 66; Galvanism, 80; Heredity, 88; Histology, 89; Homœopathy, 90; Hospitals, 92; Hydropathy, 93; Hygiene, 93; Infanticide, 95; Instinct, 96; Materia Medica, 120; Medical Lexicons, 121; Medicine, Miscellaneous Essays and Treatises, 121; Medicine, Science and Practice, 122; Mesmerism, 123; Myology, 132; Ophthalmoscope, 142; Orthopedic Surgery, 143; Pathology, 147; Pharmacy, 150; Phrenology, 152; Physiognomy, 153; Physiology, 153; Poisons, 155; Post-Mortem Examination, 157; Psychology, 160; Sewage, 173; Sexes, Relation of, 175; Sleep, 178; Species, 180; Surgery, 185; Therapeutics, 190; Thermometry, 191; Veterinary Medicines and Surgery, 198.

Special Diseases.—Apoplexy, 8; Bladder, 22; Bones, 23; Bowels, 24; Brain, 24; Breath, 24; Bronchitis, 25; Catarrh, 28; Cattle, 28; Children, 31; Cholera, 32; Club-Foot, 37; Colds, 38; Consumption, 40; Contagious Diseases, 40; Dentistry, 44; Diphtheria, 46; Ear, 49; Epilepsy, 71; Erysipelas, 71; Eye, 74; Fever, 75; Headaches, 86; Heart, 87; Hip, 88; Horse, 91; Hydrophobia, 93; Insanity, 95; Kidneys, 110; Liver, 115; Lungs, 117; Mental Disease, 123; Midwifery, 125; Mouth, 131; Nervous System, 133; Neuralgia, 133; Opium, 142; Ovaries, 144; Paralysis, 146; Pulmonary Diseases, 161; Rectum, 162; Scrofula, 173; Sea-Sickness, 173; Sheep, Diseases of, 176; Skin, Diseases of, 177; Spermatorrhœa, 181; Spine, 181; Stammering, 183; Stomach, 183; Tetanus, 190; Throat, 191; Urine and Urinary Organs, 197; Uterine Diseases, 197; Vaccination, 197; Venereal Diseases, 198; Women, 202; Zymotic Diseases, 205.

MILITARY SCIENCE.

Arms and Armor, 11; Artillery, 12; Cavalry Tactics, 28; Civil Service and Army, 36; Drum and Fife Instructor, 48; Engineering, 67; Guns, 85; Infantry Tactics, 95; Military Law, 126; Military Science, 126; Nautical Almanacs, 132; Naval Architecture, 133; Navigation, 133; Ordnance, 142; Rifle-Practice, 165; Signals, Military and Naval, 177; Surveying, 186; Tactics, 188; Torpedo, 192.

NATURAL SCIENCE.

Animals, Locomotion of, 8; Animals, Training of, 8; Aquarium, 9; Botany, 23; Butterflies, 26; Cage-Birds, 26; Canary, 27; Cats, 28; Cattle, 28; Dogs, 47; Entomology, 70; Ethnology, 72; Evolution, 74; Ferns, 75; Geology, 81; Mammalia, 118; Natural History, 132; Ocean, 142; Ornithology, 143; Ovology, 144; Parasites, 146; Rat, 162; Sheep, 176; Snakes, 178; Species, 180; Swimming, 187; Trees, 194; Walking, 199; Zoology, 204.

NOVELS AND ROMANCES.

List of Recent Works of Fiction, 138.

PHILOSOPHY.

Autology, 15; Logic, 116; Mental Science, 123; Moral Science, 130; Philosophy, 150; Psychology, 160.

PHYSICAL SCIENCE; ALSO ASTRONOMY, METEOROLOGY, ETC.

Acoustics, 1; Aëronautics, 2; Astronomy, 13; Chemical Physics, 30; Climatology, 37; Dynamics, 49; Earth, 49; Earthquakes, 49; Electricity, 66; Galvanism, 80; Heat, 87; Hydraulics, 93; Mechanics, 121; Meteorology, 124; Moon, 130, Ozone, 144; Physics, 152; Sound, 179; Spectroscopes, 181; Spectrum Analysis, 181; Steam, 183; Storms, 184; Sun, 185; Transits of Venus, 193; Ventilation, 198; Volcanoes, 199.

RELIGION.

Biblical Commentaries.—Acts of the Apostles, 2; Apocalypse, 8; Colossians, 38; Corinthians, 41; Daniel, 43; Ecclesiastes, 50; Ephesians, 71; Esther, 72; Exodus, 74; Ezekiel, 74; Galatians, 79; Genesis, 81; Gospels, the Four, 83; Hebrews, 87; Isaiah, 97; Jeremiah, 99; Job, 100; John, 100; Joshua, 100; Jude, 100; Judges, 100; Kings, 110; Leviticus, 114; Mark, 119; Matthew, 120; Minor Prophets, 128; New Testament, 135; Old Testament, 142; Parables, 146;

WHAT AND HOW TO READ.

Abolition. *See* SLAVERY.

Aborigines. *See names of countries*, INDIANS, *etc.*

Abortion, Criminal. *See* INFANTICIDE.

Abstinence. *See* TEMPERANCE LITERATURE.

Abyssinia. *See also* AFRICA, EGYPT, NILE, *etc.*

Books on foreign lands containing adequate accounts of the human beings inhabiting them are always more pleasant reading than those which describe only beasts, plants, rivers, and mountains. For this reason Baker's and Blanford's admirable works will be found less entertaining than Hozier's and Markham's. The English Expedition is very much like a foot-note to one of the last pages of history, and the narratives of it bring a fanatic, semi-civilized, and mongrel Semitic race into striking contrast with a Teutonic people, representing the highest culture as yet attained by man.

4. Baker. The Nile Tributaries of Abyssinia..... ..... $2 00
4. Blanford. Observations on the Geology and Zoology of Abyssinia... ..... 7 00

Africa. *See also* ABYSSINIA, EGYPT, NILE, *etc.*

The study of the origin, growth, and decline of civilization finds in this division of the globe the richest and best material. Accounts of the primitive ways and customs of any group of its inhabitants teem with valuable suggestions in regard to the earliest stages of our own social institutions and intellectual achievements. The charm of books on African travel is sometimes heightened when the explorer enters the wilds with some definite aim; as Livingstone desiring to reach the sources of the Nile, or Stanley undertaking to recover the lost Livingstone.

Amazon.

It is a curious fact that the course of the Amazon is not accurately known. The "Note-Book of an Explorer" has much that will prove of interest to the general reader. The "Naturalist," however, is not quite as scientific as the title of his work seems to suggest. Orton's book on "The Andes and the Amazon" may after all be the most agreeable work to students of foreign lands.

2. Orton, J. The Andes and Amazon. Map and Illustrations 2 00

America, Discovery and Early History of. *See also* UNITED STATES, *the various Countries, and States.*

When and by whom this continent was actually discovered for the first time Anderson and Goodrich do not determine, and it is doubtful that it is worth the time carefully to examine their hypotheses. Baldwin's discussions of the origin and date of the antiquities of America, or of the architectural and other remains of the tribes and nations subjugated or displaced by European conquest and settlement, though not of a high order of learning and ingenuity, better deserve the attention of the educated. It must be acknowledged, however, that the time has not come for trustworthy guides through the early history of America.

America, Travels, and Travelers' Guides. *See also the various countries,* UNITED STATES, *the States, Summer Resorts, and Watering-Places.*

Whoever has neither the leisure nor the purse to travel, and examine the condition of his country, should at least find the time and money to read descriptions of

his native land. Those who travel and examine for themselves often fail to consult Guide-Books, and consequently leave unnoticed many things, each worth all the journey to come and see. Appletons' Guides will teach many an old resident curious facts about his own town and its vicinity. Those who have to be content with reading of the East, West, North, and South, will be best pleased with the vivid accounts of Hall, Rae, and Rusling, and perhaps also with the "Reminiscences of Two Englishmen."

Anatomy.

Begin with works on Descriptive and Surgical Anatomy, in order to become acquainted with the relations of organs to each other and with the distinct systems which perform the functions of the organism. Then read on General Anatomy, explanatory of the tissues which compose the organs, and pass over to Minute, Chemical, and Microscopic Anatomy, which analyzes the atomic and cell structure of the tissues, and the fluids and their contents. Marey's book on "Animal Mechanism" and Huxley's "Anatomy of Vertebrate Animals" may be read to test one's taste for these studies. The authors are lucid, terse, and forcible writers, who do not crowd their pages unnecessarily with technical terms.

Archæology. *See Countries and Subjects.*

Architecture. *See also* CARPENTRY, CHURCH ARCHITECTURE, FARMING, GOTHIC ARCHITECTURE, LANDSCAPE, SCHOOL ARCHITECTURE, SHIP-BUILDING, VENTILATION, *etc.*

The following list has been compiled principally for those practically interested in house-building, and Downing's, Eassie's, and Lefever's books will be a great help to them. But architecture, the poetry of space, is important also as an historical study; for within certain limits a people's culture may be gathered and estimated from the buildings it has produced. Herein neither amateur nor professional student will discover in English any thing superior to Fergusson's works. However, *ars longa est, vita brevis*, and universal histories even on special subjects are somewhat unmanageable. By studying the plastic art of the Greeks, the architecture of the Middle Ages, the paintings of the Renaissance, and the music of the present day, the periods in which the four principal branches of art in turn burst into bloom, the general reader will be sure to become acquainted with some of the best flowers of art. Hence Street's "Brick and Marble in the Middle Ages" should not be overlooked.

Who wants to read about art and artists for the sake of culture and pleasure, rather than for the sake of gaining knowledge professionally serviceable, should select the books of Chorley, Hamerton, and Ruskin, and bear in mind that the last is to the orthodox school of art what Strauss is to orthodox theology. Dwight, Long, and Torrey, have written for more practical purposes.

Art, History of.

Winckelmann's work is very scientific, and excellent as a book of reference; Taine's books have the advantage of being most charming reading; but, selecting a period of the history of art with which to begin its study, it is best to choose the age of the Renaissance, and read Lacroix. The illustrations render this book somewhat costly; but it is impossible to teach art without pointing to specimens of art. The eye has a share in the study at least as large as the mind's.

The last two decades have not produced in English any thing equal to Layard's admirable works on the ruins of Nineveh and Babylon. Rawlinson's series of "Monarchies of the Ancient World," of which the first volume is thirteen years old, is at present somewhat out of date in matters of Assyriology. Philip Smith's "Ancient History," which is ten years younger, is excellent, but compressed. There is therefore reason to be thankful for the translation of Lenormant's work, which gives an adequate idea of the great success which has attended the vast labors of recent Oriental research, though one must always remain on his guard not to be carried away into the bold hypotheses sprung from the enthusiasm of the learned Frenchman. However, many of the documents on which his assertions are based may be found, literally translated, in "The Records of the Past," and in George Smith's "History of Assurbanipal."

Bible, History of the. *See also* JEWS, HISTORY OF THE.

The history of the Bible is a study of enormous dimensions, and the mastery of the entire list of books below can at best give only a general idea of its tasks. William Smith's works are the fullest and most trustworthy for the periods embraced by the Scriptural accounts themselves to the time of the settlement of the canon of the New Testament. For this subject no better guide can be had than Westcott. The other books mentioned do not so much aim at scientific accuracy as to promote the general knowledge of the revisions and alterations to which the Scriptures have been subject.

Biblical and Theological Dictionaries.

The "Dictionary of the Bible," edited by William Smith is the best, and even as abridged by Barnum it is as trustworthy as any other in the English or American market. In conjunction with it may be used Blunt's "Dictionary of Doctrinal and Historical Theology," and the two will in many respects form a satisfactory substitute for the large work edited by McClintock and others.

Prattle of literary anecdotage, and reminiscences of eminent men of other men, and of things and events worth remembering, are pleasant reading in hours of self-gratification. It is difficult to say what will surely prove interesting. The tidbits of the "Bric-à-Brac" series, Field's "Memories of Many Men," Hamilton's "Reminiscences," Parton's "Men of Progress," accounts of the graduates of various colleges, Vasari's "Lives of Eminent Painters, Sculptors, and Architects," Proctor's "Bench and Bar of New York," Holland's "Recollections of a Past Life," Barnard's "Tone-Masters," Baring-Gould's "Lives of the Saints," Goldwin Smith's "English Statesmen," and Jameson's or Strickland's "Lives of Female Sovereigns and Illustrious Women," are sure to bring the spare hours of persons in the proper mood, and of a

certain culture, swiftly to an end. Biographical dictionaries are never absolutely trustworthy. Allibone's, Appletons', Lippincott's, and Maunder's, are serviceable works.

Biology. *See also* EVOLUTION, NATURAL HISTORY, PHYSICS, *etc.*

Introductions to biology, like Nicholson's, are highly valuable; but the general reader may at once take up the book with which Darwin introduced the subject again to public notice, and continue his studies with the later publications of the same author. Bastian's "Beginnings of Life" is capital reading for those who are not easily tired by minute microscopical investigations, and not afraid of the doctrine of spontaneous generation. Mivart and Henslow have written to prevent confusion in the speculations of science and theology. For biology, rather philosophically than experimentally considered, it is best to turn to Spencer, the *facile princeps* in this domain.

Botany. *See also* FLOWER CULTURE, FRUIT CULTURE, *etc.*

It is unnecessary to extol the wonderful gift of Figuier for compiling works on scientific subjects, whose attractiveness for beauty of style, arrangement, and illustration, is nowise impaired by that want of accuracy usually to be regretted in books prepared for popular use. Though books, intended specially for the instruction of the young, are rigidly excluded from these lists, Miss Youmans's introductory books of botany are here mentioned, for the reason that young persons already "turned out" will delight to obtain from them a severely scientific training in the gentlest manner possible. In connection with Asa Gray's works, Pettigrew's "Physiology of the Circulation in Plants" should be read; and, as a handy book of reference, Lindley and Moore's may be used, or Loudon's "Encyclopædia of Plants" for those indigenous to, cultivated in, or introduced into, Britain.

Buddhism. *See also* RELIGIONS, HISTORY OF.

The lives of founders of religions called supernatural generally become unhistorical. But, to gain information in regard to the present tenets and practices of a given body of believers, it would be a circuitous route to take up the study of the life of their founder, or even the study of their scriptures. If Occidental scholars had written more about the actual state of Oriental religions, there would be less of that mischievous undervaluing of their doctrines so common even in our educated classes. Alabaster's and Schlagintweit's works, however, will tend to correct the erroneous opinions generally entertained on Buddhism.

Chemistry. *See also* AGRICULTURAL CHEMISTRY.

For a clear and comprehensive view of the new facts developed during the last ten years, facts which have given the science an entirely new aspect, and for a prophetic vision of facts at present unknown but soon to be ascertained, Cooke's "New Chemistry" is beyond question the one to read. On the philosophy or theory of chemistry it is complete and accurate as to the past, and full of hopeful inspiration as to the future. On the other divisions, technical, practical, and analytical chemistry, it is difficult to point out a good work within the reach of general readers, as books on these subjects are intended for those ready for the *instantia crucis*. The list of works on Chemical Physics and Physiology, however, will admit of arm-chair study.

Christ, Life of.

To recommend the reading of one Life of Christ rather than another is a matter of preference on theological grounds; for all the Lives, so far written, and perhaps all that ever will be written, are developments of doctrinal views. Since the appearance of Seeley's luminous "Ecce Homo," which seeks to bring into prominence the human basis of the Redeemer's life, several books, as "Ecce Deus" and "Ecce Ecclesia," aiming chiefly to demonstrate the divine foundations of Christ and his Church, have been published. The best among the more voluminous works, replete with hermeneutical and historical theology, are Farrar's and Deems's. But these also present one aspect only—the former the divine, and the other the human; and, further, they are specially addressed to one class of readers—Farrar's to those already within, and Deems's to those still without, the pale of the Church.

Christian Church, History of the.

The study of Van Oosterzee's "Theology of the New Testament," and Bernard's disquisition on its growth and progress, as traceable from Matthew to the Apocalypse, is an indispensable foundation for an intelligent course of reading on the history of the Church and of doctrines. Few will be ready to undertake to read exhaustive works, consecutively, on every period and phase of the Church and her creeds. A diligent student of the Primitive Church, and of the events and motives of the Reformation, however, will gain an insight into the history of the Church sufficient to bridge over the intervening and subsequent periods. "The Early Years of Christianity," by De Pressencé; "The History of Latin Christianity," by Milman; "The Conversion of the Northern Nations," by Merivale, and "The History of the Reformation in the Time of Calvin," by Merle d'Aubigné," are trustworthy authorities, possessing qualities of diction which render their perusal rather pleasurable than irksome.

Civilization, History of. *See also* ETHNOLOGY, HISTORY, *and the various countries.*

He who studies the course of civilization will discover that it is not one of steady development and progress. The history of culture is one of rises and collapses, and the latter are always more or less general, and give an impulse in new directions. The pioneer work, and also the master-work of all histories of civilization, is Buckle's. The animosity shown it on its first appearance has greatly subsided, and even Guizot's admirable work has not been able to supplant it. Books like Lecky's "History of Morals," luminous expositions of the origin and incrustation of customs, are conceived only in ages like our own, and will serve as an introduction to the religious philosophy which has gained a birth-right among the intellectual achievements of our day. In works like Lubbock's and Tylor's, which attempt to portray from the condition of existing uncultured races the kind and degree of culture possessed by the earliest and prehistoric peoples, one may obtain an adequate idea of the long ages needed to reach our own civilization, though the calculation has to be made without the factors of the breakdowns which presumably happened also in those first phases of human culture.

Classical Dictionaries. *See also* GREECE *and* ROME.

Not one of these dictionaries, which are the best in the English language, embodies the vast and important philological researches of the past twenty years; but as this is a defect not easily remedied, and a choice must be made, it is advisable to take one of Smith's Dictionaries, or abridgments of them; or, if a hand-book of the antiquities only of Greece and Rome is needed, the compact volume of Rich.

Cyclopædias. *See also Dictionaries of special subjects.*

The value of books of reference greatly, if not entirely, depends on the fullness and freshness of their contents. Articles of historical or scientific research ten

years old necessarily lack the most interesting and valuable portions. In choosing a cyclopædia it is therefore a matter of supreme importance to select the latest and largest, bearing in mind, however, that one which sacrifices space to mere definitions of technical terms, or to bare explanations of words of rare occurrence, or to thousands of villages of ten or twenty inhabitants, and possessing neither historical nor commercial interest, does nowise supersede the use of a Webster's or Worcester's "Unabridged," or of a gazetteer embodying the latest census. Considering these facts, there is no doubt that Appletons' "American Cyclopædia" ranks highest.

Domestic Economy. *See also* COOKERY, DOMESTIC MEDICINE, HOUSEHOLD RECIPES, *etc.*

Though the grief that the good old times, when every thing was cheap, are gone, will always be ours, there is this consolation, which also may ever remain with us, that our own times may be rendered equally good and cheap by the practice of economy. Some of the works on Domestic Economy, given below, professedly intended for those desirous to "save the penny," etc., advise what, if experimented on, would prove neither profitable nor enjoyable, even to those willing to let their means control their tastes. Every hour and every person has special requirements, and the only way of obtaining from books counsel to meet them, is to consult Beeton, Eastlake, Gardner, and Sedgwick, in succession, with the intent of following the best of the four.

English Language, Studies in. *See also* SLANG.

The study of words and the niceties and disputed points of our language has received a great impetus within ten years past. No one in this country has done more to popularize it than Richard Grant White, whose essays are exceedingly suggestive, whatever fault may be found with some of his *dicta*. The highest authority on this subject is undoubtedly Maetzner, the German *savant*. Frequent consultation of Smith's "Synonyms Discriminated" will lay a good foundation for an accurate use of words. General reviews of the literature are also becoming numerous, and the reader has a wide choice between the vast discursive essay of Taine and the hand-books intended especially for students. In the matter of selections from classic authors, Knight's "Half-Hours" is the earliest of our present standard collections, and still remains one of the best. The "Little Classic" series contains many articles of very recent date. Dana's "Household Book of Poetry" still stands at the head of poetical collections, though some others of high merit are in the market.

Ethnology. *See also* BIOLOGY, NATURAL HISTORY, PHYSIOLOGY, *names of countries, etc.*

Ethnology, including Anthropology, is the science of all things relating to man, as a product of Nature, as well as a producer of religion and institutions, science and art. Darwin's, Haeckel's, and Huxley's works attempt to explain the origin and development of man as a zoological being; Argyll's, Dawkins's, Figuier's, Foster's, Lubbock's, Quatrefages's, and Tylor's, the origin of civilization, and the geological age in which man must have first appeared upon earth; and Buechner's, Burgess's, and Mivart's, discuss the degrees of probability attached to these theories.

India.

A lifetime is too short to master the history of India, with its accessories of religions, languages, literatures, and arts, and whoever is not of a temperament to appreciate the poetry of it all, will not find it a very interesting study. Kaye's, Macleod's, and Trevelyan's books recount the dire story of the events which led to the horrors of Lucknow, and the works of Colchester, Prichard, and Walker indicate by their titles that they contain summary accounts of the history of the English in India. As a consecutive narrative of the fortunes and misfortunes of the race, whose pride it is to have engendered all the civilized nations of Europe and America, Wheeler's "History of India" is to be especially recommended for its great display of erudition, delicate critical judgment, and high-toned diction.

Ireland. *See also* ENGLAND.

Irish history is a tangled web, whether taken up at the question of the origin of the Gaedhilic race, or at the time of Wentworth, Cromwell, and James II., or where its meshes are netting our own country into the intrigues of Fenianism. If anywhere, the reader has to use his "grain of salt" here, as well as in the books of the friends of the Irish, as in those of their enemies. Burke, Froude, Godkin, Lecky, and Thebaud, should be read together, each one to amplify and correct the statements of the others; but if entertainment only, or insight into Irish character and customs, is sought, the volumes of Carleton will afford a pleasant hour.

Japan.

It is difficult to write a good history of Japan. This is not owing to any lack of material, but to the great difference between the Japanese and ourselves physically, morally, and psychically. Even mere books of travel lack that sympathy with the country, the people, and their institutions, which alone can make such books interesting and trustworthy. Adams's "History of Japan," though but an outline of the leading incidents which have mainly determined the fortunes of that great empire of islands, is characterized by more fairness toward the Asiatics than previous works have exhibited, and in Humbert's "Japan and the Japanese" is shown a

kindly appreciation of their odd ways which is quite refreshing after the thunder-storms of political, ethical, and religious criticisms so common in earlier narratives of personal experience and travel.

Khiva. *See also* CENTRAL ASIA.

The highest authority on the history and ethnology of the countries of Central Asia is unquestionably Vámbéry, the Hungarian professor; but in regard to politics his statements are less trustworthy, as they are ordinarily actuated by a seemingly inherent antipathy for every thing Russian. MacGahan, a correspondent of the

New York Herald, who was present with the Russian army at the recent capture of Khiva, has, according to general acknowledgment, given a very impartial account of the campaign, and made of it a very entertaining volume, full of accurate information.

Language, and Linguistic Studies. *See also* ENGLISH LANGUAGE, STUDIES IN, *and names of languages.*

The study of language, as any means of communicating thought, and especially as any form of articulate speech, and not as the study of one language, or several, has recently been extended to enormous dimensions. The science of language inquires into the origin of language, into the laws of the development of one, or several, or all languages; into the reasons of the diversities or similarities of languages; into the causes of the grammatical and syntactical constructions peculiar to each, and into the relations which various languages hold to each other. To attain a general knowledge of the portent of these questions, and of the progress which has recently been made toward the solution of the multitude of problems arising from them, one can do no better than read the "Lectures on the Science of Language," by Max Müller, and the essays on "Language and the Study of Language," by W. D. Whitney. It is advisable to read the works of both eminent scholars, as their opinions on some important subjects are directly opposed to each other.

Logic.

Wilson takes the ground that logic deals, not with ideas, but with things, represented by words under the aspects in which the mind contemplates them; Jevons holds that induction is but a form of deduction, and that we cannot obtain any insight into the notion of things by which we can attain necessary truths and axioms; McCosh considers logic to be based upon "the notion" and the nature and relation of terms as the foundation of all reasoning; Mill belongs to the sensational school, and does not make logic an *a priori* science; Bain conceives and treats logic as Mill does, and enters upon discussions of the modern generalization of the correlation or indestructibility of force or energy; the Hegelian logic is a portion of the general scheme of absolute idealism; Tappan's logic follows the Kantian system, and it depends on the state of the reader's logical discipline which work he shall choose to read next.

Madagascar.

The rapid progress of Madagascar in civilization, through the influence of its sovereigns and the higher classes, who have embraced Christianity, render this country of special interest at the present time. Ellis gives a succinct account of the establishment and growth of the missions there, while Sibree deals more generally with the country, and the manners and customs of the people. The two books should be read in connection.

Mohammedanism.

Draper's "History of the Conflict between Religion and Science" has found a place in this list because the subject of Mohammedanism is handled in it at some length. Dr. Draper makes the statement, startling to some readers, that Mohammedanism is the first reformation of Christianity, but the exposition of the benefits conferred on European thought by Arabian science and philosophy amply serves to justify the expression. The latest able account of this Oriental religion and its founder has come from the pen of R. B. Smith, and it is hardly to be expected that the next few years will produce another book on the subject calculated to decrease the importance of his "Mohammed and Mohammedanism." Palgrave's collection of "Essays on Eastern Questions" is an excellent means of becoming acquainted on the one hand with the actual state of Mohammedanism in Mohammedan lands, and on the other with the political significance of Arab countries, the book being written by one who is both an observing traveler and a keen-sighted statesman.

New York City.

Every one knows what an incomparably beautiful and accurate, though cheap, little volume is Appletons' "New York Illustrated."

Rogers's "The Glory of New York" traces the rise and progress of the city, giving most interesting statistics of its publication and resources, and revealing the foundations of its future prosperity. Richmond's "New York and its Institutions, 1609–1871," is a library of information pertaining to the past of the metropolis. A veritable "History of New York" remains to be written.

Novels and Romances.

Marie Howland's "Papa's Own Girl" is a mixture of theology, political economy, free-thought, woman's rights, and seduction. Mrs. Jenkins's "Jupiter's Daughters" is classic only in title, which refers to a portion of the "Iliad," somewhat French in matrimonial affairs, and somewhat American in the portraiture of girls. A pretty little orphan flower-girl moves in Ouida's "Two Little Wooden Shoes," with the charming notion that women are rose-buds made for men, and when she comes to be old enough to be plucked, some of Ouida's diabolically handsome and smart men take her to their breast, and throw her aside when the ball is over. William Black excels in descriptions, and, knowing it, he makes the most of his talent, and wraps his men and women in endless bandages, painted with hieroglyphic comments on all sorts of natural and unnatural scenes. The process takes all the life out of his heroes and heroines, and makes them appear like so many Egyptian mummies; but it must be acknowledged, though painful to do, that Mr. Black is one of the best of living English novelists. "Nancy," by Rhoda Broughton, marries, in the tom-foolery of a boarding-school girl, a graybeard of the fashionable world, because he is "so nice." After marriage, a young man makes love to her without her knowing it and understanding him; but her husband does, and feels jealous. In order to heighten the interest of the story, Nancy is made to believe that she also has reason to be jealous. "Harry Heathcote of Gangoil," Anthony Trollope's hero, does hard work in the way of flirtation, and serves as an excellent excuse for some tolerably fine writing on family life and bush-fighting in Australia. Mrs. Oliphant's idyllic story "A Rose in June" is as delicate in diction, fragrant with poetry, and prickly with gentle irony, as the object suggested by the title. Rose adores her father, who is a *bel-esprit* passionately loving indolence and poetry, bitterly regretting his lack of wealth, and leaving to the world, as the sole monument of his having lived in it, a large, penniless family. Rose's mother intrigues for a rich son-in-law, but, when all seems well, Rose feels bound to tell her affianced that she does not love him, which ends the matter.

Though we should relish the task, it is hardly possible thus to go through the whole list of novels and romances published within the past five years. In fact, their number is too large even to give the names and titles in this small volume. To make a selection is also unadvisable, as every novel not mentioned would be the very one which somebody thinks the best. Furthermore, those which are called standard by general consent are given under the author's name. While thus on the point of concluding that it is wisest to have no list of novels and romances whatever, and simply to direct to the catalogues of booksellers and publishers, which are easily consulted, and give the prices of various editions, further thought induced us to give a list of the noteworthy works published in England or America for the first time in 1874, and the early part of 1875, which will be of service to those especially who want their literary food like their other daily bread and meals, namely, fresh and hot. The prices are not given, as most of the books can be obtained in editions to suit anybody's taste or purse. It is probably unnecessary to add that those who read novels with the object in view of being entertained—which is the principal object of reading them—but who can be entertained only by what is good and pure, should watch for the criticisms of literary periodicals whose reviews of new publications are what they should be, and not genial notices to please authors and publishers, and deceive the public.

Palestine. *See also* EAST, THE; MESOPOTAMIA, SYRIA, *etc.*

We are on the eve of such a thorough knowledge of the Holy Land that we shall be able to retrace almost literally step by step the footprints of the founder of the Christian Church. In fact, when the English and American societies for the exploration of Palestine have completed their work, the geographical features of the whole country, from the Mount of the delivery of the Law to the Lebanon, will be better known to students of Biblical history than probably the topography of any American state or European country is to its inhabitants. A great many books of travel in Palestine have been written, but very few rise above commonplace twaddle. Most of the authors, whether clergymen or enterprising ladies, speak at length on the sentiments which the sight of the Holy Places produced in them, but greatly neglect to describe with adequate fullness the sites and scenes themselves. A small number of writers on Palestine fall into the error of ridiculing what is sacred to others, and only very few exhibit learning and good taste sufficient to make their accounts of their personal experience pleasant and instructive reading. Stanley, Tristram, Tillotson, and Wilson, belong to the few of the last group.

Patents and Copyrights, Laws of.

The first in the list is simply a decision rendered by Judge Monell in the Supreme Court of New York in the case of Palmer *vs.* De Witt, to which Mr. Booth has added some notes. Law has made a collection of the statutes passed by Congress, but it does not contain the important law of 1870, which repealed all previous legislation on general copyright, and which is the law now in force. Fisher's collection of patent cases decided in the United States Circuit Courts from 1848 to 1874, is of great value to patent lawyers. The fourth edition of Curtis's work, published in 1873, is probably the best treatise on the subject in general, and is a recognized authority in Europe and America.

Philosophy.

Chalybæus desires to show that pure philosophic speculation, and the results of experimental science, harmonize with the dicta of theology, and in doing so he follows in part the views of Hegel, in part those of Schelling, and in part those of Herbart. Cousin, though not very accurate in historical expositions, has the art—so rare among philosophers—of graceful and lucid composition, and the object of deducing an eclectic philosophy from the systems. "The True, the Beautiful, and the Good," are to him not mere abstractions, but attributes of God. Fiske's "Cosmic Philosophy" is a piecing together of the principal arguments and sayings of eminent scientists of the school of "Natural Philosophy" in support of the doc-

trine of Evolution. The Scottish philosopher, Sir William Hamilton, though in a measure only a disciple of Reid, may be considered to be the founder of a school which should be called the "Philosophy of Common Sense," and his method of elucidating it leaves nothing to be desired in the way of completeness and clearness. Hickok, the American metaphysician, is decidedly theistic and supernaturalistic in his ideas. What MacVicar's scope and tendency are, is rendered sufficiently evident by the enumeration of the parts of his work. Kant's "Philosophy" has never before been as ably edited for English readers as Mahaffy has done. McCosh's "Scottish Philosophy" is one of the most erudite and readable books on the subject. John Stuart Mill's position is that the end of morality is happiness, that the basis of theology is at best only an inference from the analogies of experience, and that the certainty attainable by science is, after all, merely relative. Of hand-books of reference on the character and progress of philosophic systems, nothing fuller can be had than the American edition of Ueberweg's "History of Philosophy," but Schwegler's will be ample for those who only desire a sort of telescopic view of the "line of descent" of the principal speculations.

Political Economy. *See also* CHURCH AND STATE, GOVERNMENT, LABOR QUESTION, REPRESENTATION, SOCIAL SCIENCE, *etc.*

The key-stone of the great arch of the sum of all human knowledge, is the science called Political Economy. It is to the affairs of this world what theology is considered to be for the next. On account of the great importance and extreme

difficulties of both, and as it seems to take "but just a little thinking" to lay down infallible doctrines in each, Religion and Politics are the two fields of literature where the luxuriant growth of tares renders a luxury every grain of wheat. For this reason it is a genuine gratification to meet with a book like Bagehot's "Physics and Politics," which is a most suggestive account of the rise of political societies, according to the same laws of "Selection" and "Heredity" operating in Nature. Students of Political Economy will relish also Cairnes's new expositions of some leading principles. It is especially valuable for an examination of the theory of cost of production, or of the doctrines of international trade and values, and does away with the error of attributing the increase of wealth to the increased demand, which is like attributing the movements of a steam-engine to the opening and shutting of the steam-valves. Freeman's "Comparative Politics" is an analysis of Greek, Roman, and Teutonic institutions, and shows that the further back we go the greater is the resemblance of the political organizations in these three great families. But he has a theory to support, and, though his pleading is admirable, he has not always given a fair presentation of the facts.

Religion, Philosophy and History of.

"In these our days it is almost impossible to speak of religion without giving offense either on the right or on the left. With some, religion seems too sacred a subject for scientific treatment; with others it stands on a level with alchemy and astrology, as a mere tissue of errors or hallucinations, far beneath the notice of the man of science." This remark of Max Müller's, though in general true at present, would soon require considerable modification if learned, unbiased, but genuinely religious men, like himself, would follow up the path of research and instruction which he has opened with his "Introduction to the Science of Religion." As a rule, books on religious subjects run one train of thought on a single track between two termini—the Church of Rome and Materialism; the only difference being whether they urge toward the one or toward the other. Thus James Martineau's exquisite address on "Religion as affected by Modern Materialism" is a warning against the mixing of sciences and religion, and an argument from Materialism to the Church. Draper's "History of the Conflict between Religion and Science" describes the four principal stations which the world has so far successfully left behind in its escape from the Church to materialism. We may expect centuries to pass away before the "Onward!" of Science silences the Church's cry of "Return!"

Russia, History of. *See also* CENTRAL ASIA, KHIVA, *etc.*

Russia's advance eastward has set many English pens in motion, and to the number of the books already noted under the heading "Khiva" must be added the publications of Dilke and Von Hellwald as deserving of the highest praise for scholarship and fairness and accuracy of statement. The account which Loubat has given of the American mission to St. Petersburg is of such a nature as to interest hardly any one outside of Mr. Fox's immediate family circle. Whoever wants to relish a good book, on a subject difficult to handle, and but little examined, will find in Ralston's "Early Russian History," not as the author modestly signalizes his admirable work, a mere *zakuska*, or snack, which precedes a Russian dinner, but a rich banquet prepared by a great artist. Ralston first repeats with stylistic grace and historic discrimination the prominent legends of Russia's infancy, which falls somewhere about the reign of Alfred the Great; then tells the bloody story of subdivided Russia, with its host of sovereign princes, of the tyranny of the Golden Horde, and of the oppression it sustained at Polish hands; and he terminates his closing lecture with the election in 1613, as czar, of Michael Romanoff, grandfather of Peter the Great. This is surely a good beginning for a trustworthy and erudite history of Russia, of which English literature is sadly in need. Dixon's "Free Russia" gives currency only to some erroneous notions on the question of the origin of serfdom.

Scientific Series, International.

Literary persons know this score of books in red, striped with black and gold, as the Guardsmen of the Queen of Popular Science, and cheer them at review as heartily as the masses at public parade greet the uniforms of regiments famed for superior drill, or great valor in battle. The authors of the "International Scientific Series" are a company of intellectual giants, picked from England, France, Germany, and the United States, whose task is to insure to the non-scientific public the acquisition of the immense and important researches and discoveries made in the various territories of knowledge. So far the labor of each has been crowned with complete success. What can be more admirable as a popular treatise on the science of political organization than Walter Bagehot's "Physics and Politics?" He examines the natural processes of "Nation-making," and the progress made in the formation of governments, to reach the grand conclusion that "Liberty is the strengthening and developing power—the light and heat of political nature." Unintentionally, but practically, "The Science of Law," by Sheldon Amos, takes up the same line of thought, and enters upon a consideration of the conditions of internal government. Great pains were taken by the author to translate technical terms

back again into the terms familiar in common speech, and to bring within the compass of a small volume the recent history, and the province and limits of the science of law, the distinction and opposition of law and morality, the principles of laws in relation to the state and family, of ownership or property, of contract, and of criminal and civil procedures, also of international law, and finally of codification. To remove all fear that such a book may, after all, prove tedious reading to a novice, here is a sentence chosen at random to illustrate the author's felicity of diction: "That which steadies him (man) and keeps him firm to his conscious or unconscious purpose, protecting all men against the imperfections of each, and protecting each against the pressure of all—kind and yet unflinching, personating the past, the present, and the future—imperiously addressing all and yet whispering to each—is *law*." A master's hand has dissected a special subject of jurisprudence of great importance to the general public, namely, the question of responsibility in mental diseases. The book comes from a physician experienced in the treatment of the insane, whose arguments will exercise a lasting influence on the popular and judicial judgment, and whose happy illustrations and simplicity and vigor of expression are wondrously fascinating. Next to it should be placed Alexander Bain's treatise on the connection between Body and Mind, which is a most comprehensive summary of the recent physiological experiments in psychology. The whole body of research on the system of the organs of the psychic functions of man the eminent author has moulded into such philosophically and experimentally well-balanced forms, that the reader never feels oppressed by the enormous weight of the discussion. Next in order, surely, comes Dr. Smith's work on the science of keeping the body in a healthy condition. His "Foods" are those in popular use, but not as commonly prepared, and not as usually served. But he does not merely condemn. He gives an account of the various processes of preparing meats, cheese, butter, vegetables, and the like, and tells how the qualities of every substance may be tested. He is very hard on teetotalers, and drinkers of hot tea, etc., for he thinks "the stomach was not constructed to hold boiling water." The number of Dr. Smith's experiments is quite astonishing, and the quaint recipes from "Curry," of the fourteenth century, will not fail to amuse modern house-keepers. In extension of Dr. Smith's chapters on the constituents of foods, one may enter more deeply into the science of chemistry with another book of the series. "The New Chemistry" is a compendium of excellent and concise statements of the laws of inorganic bodies so far ascertained, and some curious theories and fancies of the probable nature of the laws which remain to be ascertained. The "Animal Locomotion," and "Animal Mechanism," the one by Dr. Pettigrew, the other by Prof. Marey, show how the forces at work in the inorganic kingdom find their application in organized beings with reference to terrestrial and aërial locomotion, or walking, swimming, and flying. Prof. Tyndall's peculiar charm of description and exposition is nowhere more attractive than in his account of all the wondrous transformations through which water is made to pass in, upon, and over the earth. Equally readable, though one would hardly suspect it of so purely scientific a book, is Balfour Stewart's "Conservation of Energy," which is the new name for the doctrine of the Correlation of Forces; and its copious familiar illustrations of the varieties of transmutation of the various forms of energy bring the subject within the reach of the widest circle of readers. Herbert Spencer's "Study of Sociology" has also won the most unreserved admiration for great lucidity of treatment, although many grave objections were raised to his theories. But still his ideas are gaining ground, and no educated person can afford to ignore his speculations. Finally, Schmidt's "Theory of Descent, and Darwinism" is a concise and popular statement of the

results of the labors of Lyell, Darwin, Häckel, and other advocates of the theory of Evolution.

This bright and formidable array of intellectual power is constantly being increased by other great men of science. The roll now shows the names of Huxley, Vogel, Berkeley, Clifford, De Quatrefages, Austin Flint, Jr., Charlton Bastian, Virchow, Steinthal, Whitney, Quetelet, Lubbock, Ferdinand Cohn, Carpenter, Claude Bernard, Liebreich, Lindsay, C. A. Young, James D. Dana, Thiselton Dyer, Rees, Ramsay, Johnson, Rosenthal, Lacaze-Duthiers, Berthelot, Odling, Foster, and Jevons. From time to time other eminent specialists are gained for the cause of popularizing the results of scientific research, and, from the unprecedented favor with which the "International Scientific Series" has been and is continuing to be supported by the general public, one may well predict that this generation will not see its close. Some distant day when the diffusion of sound knowledge effected by them will be more apparent, the historian of education and literature in America will not fail to give due prominence to the benefits which this country derived from the publication of the Red-Black-and-Golds.

Species. *See also* BIOLOGY, EVOLUTION, ZOOLOGY, *etc.*

The question of the nature, extent, and limits of what has to be understood as constituting a kind or species, is one of great importance in the study of organisms. Even the Doctrine of Evolution would meet with little opposition, if people could be made to see that species is only a convenient term in grouping or classifying the forms of Nature, and not the fiat of God to create animals only in the classes of groups in which man is please to put them. The most instructive book on this subject is Häckel's "History of the Evolution of Man." It teaches the evolution of every organic form from some other form closely resembling it, and generally somewhat inferior to it. In one instance—that of calcareous sponges—Mr. Häckel shows, from facts gathered by personal observation, that, if the general ideas of species are adhered to, these small organisms evolved in the course of a few years so large a number of forms, and so greatly varied, as would be grouped into more than a hundred genera and species. The bearing of the works of Darwin and Huxley on this point is too well known to call for an explanation. Mr. Mivart, a Roman Cath-

olic priest, and an amateur naturalist, is not in favor of all the logical consequences of recent discoveries in Nature, and, as he cannot dispute the facts, he assails the philosophical deductions. However, his works are worth reading, if only for the mere purpose of seeing how much of the doctrine of Evolution is now so amply verified that even those who are bound to the ancient interpretations of the Bible cannot dare gainsay it.

Sun. *See also* ASTRONOMY.

One of the main achievements of the past five or ten years is a true knowledge of the atmosphere of the sun. We can tell—thanks to the simplicity of Mr. Huggins's "open slit"—the rate at which the sun's vapors are moving toward us or from us. We are on the way—using the words of Mr. James Stuart—to contemplate matter under conditions different from any obtainable by terrestrial temperatures, and probably in a state of chemical dissociation (whatever that may mean—perhaps the primordial matter of chaos, as yet unspecificated by any particular molecular aggregation). And last, but not least, we have been put in possession of the elements of discoveries which appear likely to raise spectrum analysis to the rank of a quantitative as well as of a qualitative science. All these subjects will be found unfolded in the volume of J. Norman Lockyer, by the hand of one who has himself taken a leading part in the momentous discoveries therein detailed. Guillemin has also exercised his great talent for stating scientific matters in a style at once simple, lucid, and fascinating, on this field of research; and Proctor's admirable power of exposition has likewise been employed to put the subject within the reach of a larger circle of educated persons.

Unitarianism.

O. B. Frothingham does not claim any connection with the Unitarian Society, but his views coincide in many respects with those of its more radical faction. Dr. Bartol is as decidedly radical as Dr. Sears is decidedly conservative. The sermons by the representative Unitarian ministers are also of a rather conservative character; and the book of Mr. Savage, who is a recent convert from Congregationalism, belongs to the same category. James Freeman Clarke occupies a position somewhat midway between radical and conservative Unitarianism. In "Orthodoxy: its Truths and Errors," he eliminates from the Christian system, and its errors, that which is alone essential and true; in his "Ten Great Religions" he compares the doctrines of various religions with those of the Christian Church, to show the high degree of harmony existing among them all, and the deficiencies of each.

Zoology. *See also* BIOLOGY, MAMMALIA, NATURAL HISTORY, *etc.*

If anybody desires to acquaint himself with the entire field of zoology for the special purpose of gaining a general survey of the history of the animal kingdom from the lowest to the highest organisms, and through the various phases of the history of the earth, he will be at a loss to find better works for his instruction than Häckel's "History of Creation," and "History of the Evolution of Man." Of course, they elaborate the doctrine of Evolution, which some hold in no high esteem. "But, when all is said and done in the way of objection, the 'History of the Evolution of Man' is a real live book, full of power and genius, and based upon a foundation of practical original work, to which few living men can offer a parallel. If anybody can read it without profiting by the abundant information and fertile suggestions of new lines of thought which it contains, all I can say is, that I envy him; and, if anybody can read it without being struck by its clearness and methodical comprehensiveness, and without being convinced that the general line of argument is sound, whatever may be thought of the details, all I can further say is, I do not envy him." So says Huxley.
